## **ABSTRACT**

The invention is directed to chemical processes of preparing fractions from North American ginseng (Panax quinquefolium) and pharmaceutical compositions containing these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions. The products of the present invention may be used to stimulate the these fractions.
